

ROBERT STEWART

Full-Stack Software Engineering | Systems Architecture

Council Bluffs, IA | 402-595-0211 | rms.dev@outlook.com

robert-stewart.dev | github.com/rs691 | linkedin.com/in/robert-stewart-m

PROFESSIONAL SUMMARY

Full-stack software engineer with experience building and deploying production-grade applications across mobile and web platforms. Proven track record of architecting multi-tenant systems, real-time infrastructures, and cloud-native applications on AWS. Applies modern automation and development tools to accelerate delivery while ensuring strong system design principles. Currently pursuing an M.S. in Data Science to deepen expertise in data-driven systems and analytics.

TECHNICAL SKILLS

Languages & Frameworks: Python, Dart, JavaScript/TypeScript, Flutter, Next.js, Django, Node.js, Laravel, ASP.NET

Databases & Data: PostgreSQL (PostGIS), MySQL, SQL Server, Redis, Supabase, Firestore

Cloud & Infrastructure: AWS (ECS, RDS, Lambda), Azure, Docker, CI/CD, GitHub Actions, Vercel

Systems & Architecture: Multi-tenant systems, distributed systems, real-time event processing, REST APIs, workflow automation

Tools & Methods: Agile/Scrum, Git, Unit Testing, System Design

PROFESSIONAL EXPERIENCE

Software Developer | NE Innovation Labs

Dec 2025 – Present

- Engineered a multi-tenant, location-based mobile platform for Good Life Games, driving regional commerce engagement; live on the App Store and Google Play.
- Full-Stack Implementation: Built the final production environment using Flutter, Node.js, Express, and MySQL, complemented by a custom React administrative dashboard for real-time content management.
- Architectural Migration: Led a strategic backend transition from Firebase/Serverpod prototypes to a custom Node.js stack on AWS ECS to satisfy stakeholder infrastructure and hosting requirements.
- DevOps & Automation: Established CI/CD pipelines for zero-downtime deployments to App Stores and AWS, coordinating regional releases and reducing routine development tasks by 25%.
- Scalability & Efficiency: Designed real-time infrastructure supporting 1,000+ concurrent users per region and built automation pipelines that reduced tenant onboarding time by 35%.

CIS Peer Tutor | Bellevue University

Jan 2024 – Dec 2025

- Mentored 100+ students in full-stack development (Python, JavaScript, databases), improving average assignment scores by 20% through structured code reviews and system design guidance.
- Conducted in-depth code reviews and guided system design best practices.
- Developed structured learning paths across programming, databases, and testing methodologies.

Junior Web Developer | Pierson Wireless

May 2023 – Nov 2023

- Built web-based cost estimation tool using Laravel and MySQL, automating quote generation and reducing manual workload by 40%.
- Developed and deployed a ticket management system with Laravel and Azure CI/CD pipelines.
- Collaborated across the full SDLC to deliver scalable and maintainable applications.

IT Support Specialist | Pierson Wireless

Oct 2022 – May 2023

- Resolved technical issues and improved system reliability.
- Streamlined onboarding and documentation, reducing support overhead.

SELECTED PROJECTS

YourOpoly - multi-tenant local commerce & gamified discovery experience

App Store · Google Play · goodlifegames.co

- **End-to-end platform (Flutter + Node.js):** Built a cross-platform mobile system for gamified local commerce—map-based discovery, QR check-ins, leaderboards, promotions, and prize mechanics—backed by a scalable REST API and structured domain models.
- **Location validation at scale:** Implemented server-side proximity enforcement using Haversine distance with configurable per-game radii, ensuring reliable check-ins without reliance on heavy geospatial tooling (e.g., PostGIS).
- **Multi-tenant architecture:** Designed organization-scoped data models (games, businesses, memberships) with RBAC-style access control, enabling multiple regions/chambers to operate independently with tenant-specific rules, branding, and assets.
- **Identity & real-time systems:** Integrated OAuth providers (Google, Apple, Microsoft) with JWT-based session management; leveraged Socket.io for real-time client coordination (e.g., session invalidation, messaging) and Redis-backed queues for caching and asynchronous workloads.

E-Commerce Application

Vercel

- Built Next.js storefront with server-side rendering, integrated Stripe payment processing, and PostgreSQL database. Implemented session management and optimistic UI updates for improved user experience.

Django Reservation System

Python Anywhere

- Developed high-traffic booking platform with HTMX for dynamic UI updates. Designed conflict resolution logic for concurrent bookings and implemented automated email notifications.

EDUCATION & AWARDS

Bellevue University | *Bellevue, NE*

- **M.S. in Data Science** | Expected 2027
- **B.S. in Software Development**
 - *Honors:* Omega Nu Lambda National Honor Society
 - *Scholarships:* Darrel H. Gottsch Endowed Scholarship, DREAM Scholarship

Iowa Western Community College | *Council Bluffs, IA*

- **A.A. in Computer Science**
