PROFESSIONAL SUMMARY

Full-stack software engineer with production experience building multi-tenant mobile platforms, agent-driven backend systems, and cloud infrastructure on AWS. Delivered systems live on App Store and Google Play supporting 1,000+ concurrent users per region. Experienced across the full stack — from legacy CRUD applications and REST APIs to event-driven AI orchestration — with a consistent focus on clean architecture, maintainable code, and reducing operational overhead.

TECHNICAL SKILLS

Languages: Python, Java, Dart, PHP, TypeScript, JavaScript, SQL, HTML/CSS

Frontend: React, Next.js, Vue.js, Flutter, HTMX, Tailwind CSS

Backend: Node.js, Express, Django, Laravel, ASP.NET, REST APIs, WebSockets / Socket.io

Cloud & DevOps: AWS (ECS, Lambda, RDS), Azure, Docker, GitHub Actions, CI/CD, Vercel

Databases & Caching: PostgreSQL, MySQL, SQL Server, Redis, Firestore, Supabase

AI Engineering: Gemini API, Google AI Studio, multi-agent orchestration, event-driven AI systems, LLM integration, prompt engineering

Architecture: Multi-Tenant Systems, Distributed Systems, Real-Time Infrastructure, REST APIs, Agile/Scrum

Testing: Jest, React Testing Library, Postman, Flutter Test, CI/CD automation

PROFESSIONAL EXPERIENCE

NE Innovation Labs Omaha, NE

Full-Stack Software Engineer

Dec 2025 – Present

- **Multi-App Architecture:** Designed and deployed YourOpoly, a multi-tenant mobile commerce platform, live on App Store and Google Play — built with Flutter, Node.js, Express, MySQL, and AWS ECS with shared real-time infrastructure.
- **Agentic Orchestration:** Engineered an event-driven agent system using Gemini API and Google AI Studio to autonomously manage player lifecycles, execute session cleanup, generate analytics summaries, and power a context-aware player chatbot. Applied selectively to high-value workflows where deterministic logic fell short.
- **Infrastructure Scaling:** Migrated legacy Firebase prototypes to containerized AWS ECS, supporting 1,000+ regional concurrent users. Automated tenant onboarding workflows, reducing setup time by 35%.
- **CI/CD & Code Quality:** Built GitHub Actions pipelines with semantic validation gates prior to App Store, Google Play, and AWS deployments, eliminating manual release steps and reducing regression risk.
- **REST APIs & Real-Time:** Developed scalable REST endpoints and Socket.io-based real-time infrastructure; implemented JWT-secured multi-tenant data scoping and role-based access control across all platform layers.

Bellevue University Bellevue, NE

CIS Peer Tutor

Jan 2024 – Dec 2025

- Mentored 100+ students in Python, JavaScript, database design, and software engineering principles.
- Conducted code reviews focused on Clean Code practices, test-driven development, and system design fundamentals.
- Developed structured review materials and database design rubrics adopted across multiple CIS course sections.

Pierson Wireless Council Bluffs, IA

Junior Web Developer

May 2023 – Nov 2023

- Built internal business applications using Laravel, MySQL, and Azure CI/CD pipelines.
- Engineered a web-based cost estimation platform that reduced manual quote generation workload by 40%.
- Integrated safety compliance forms, hazard reporting, and a service desk ticketing system into the company CMS with full operational adoption.

- Designed automated user provisioning and directory synchronization workflows using JumpCloud, reducing administrative overhead by 50%.
- Managed enterprise endpoint security and threat detection using CrowdStrike Falcon.

PROJECTS

YourOpoly — *Flutter, Node.js, MySQL, AWS ECS, Redis, Socket.io, Gemini API*

[App Store](#) | [Google Play](#) | [goodlifegames.co](#)

- Cross-platform mobile commerce platform with QR check-ins, map-based business discovery, promotions, and leaderboards — live on both major app stores.
- Multi-tenant architecture with organization-scoped data isolation, role-based access control, OAuth, JWT auth, and Redis caching.
- Background agent service handles player activity management, session cleanup, and analytics generation; separate chatbot endpoint supports real-time player interaction.

Multi-Product Admin Platform — *Node.js, React/Next.js, MySQL, AWS*

- Architected a role-based admin platform serving two distinct products (YourOpoly and GLG-Bingo) utilizing shared backend services.
- Implemented per-product and per-tenant control panels to ensure granular access management and data isolation.
- Separated a privileged administrator layer (sensitive game logic, permissions, configuration) from scoped self-service mini-dashboards, deliberately limiting the surface area app owners could modify to reduce operational risk. Mini-dashboards let owners add/update/delete businesses, logos, timers, mini-games, and scanner codes without touching critical systems.
- Developer and post-deployment admin support across multiple tenants and both products.

E-Commerce Application — *Next.js, React, PostgreSQL, Stripe SDK*

[Live Demo](#)

- Next.js storefront with server-side rendering, Stripe payment integration, and state-persistent cart management.

Django Reservation System — *Django, HTMX, Python, SQLite*

[Live Demo](#)

- Booking platform with transaction-safe scheduling conflict resolution and automated email workflows.

Operational Efficiency & Support Suite — *Laravel, MySQL, Azure*

Internal Operations Platform — *Pierson Wireless*

- Safety compliance forms, hazard reporting, dynamic pricing engine, and service desk ticketing system built on Laravel with full CRUD and external API integrations.

EDUCATION

Bellevue University Bellevue, NE

- M.S. Data Science — Expected 2027
- B.S. Software Development — 2025

Honors: Omega Nu Lambda National Honor Society · Darrel H. Gottsch Endowed Scholarship · DREAM Scholarship

Iowa Western Community College Council Bluffs, IA

- A.A. Computer Science — 2022
